

COVID-19 among Chronic Dialysis Patients after First Year of Pandemic, Argentina

Appendix

Appendix Figure 1. Relative frequencies of A) total COVID-19 cases (N = 2,082,160) and B) COVID-19 cases resulting in death (N = 50,297) among the general population and chronic dialysis patients in Argentina by age groups during epidemiologic weeks 10/2020–08/2021. We excluded 25,516 cases (1,778 deceased cases) among the general population and 1 (deceased) case among chronic dialysis patients because of incomplete data.

Appendix Figure 2. COVID-19 cases among A) the general population (N = 1,856,928) and B) chronic dialysis patients (n = 2,170) in Argentina by epidemiological week and case classification during epidemiological weeks 10/2020–08/2021. We excluded COVID-19 cases with the case-classification "other" from the figure.
