*NA, not applicable

†Chi-squared tests for trend were performed on categorical variables with numerically increasing categories and Pearson chi-squared tests of homogeneity were performed on all other categorical variables.

‡Household level proportions.

§Data from the Malaria Atlas Project (<https://malariaatlas.org>).

¶¶Sampling cluster level measures (1km²).

#Minutes to travel 1 m.

**Lower no. = more urban.

††Data sourced from WorldPop (<https://www.worldpop.org>).

‡‡Lower no. = more rural.

§§COVID-like symptoms include: fever, cough, shortness of breath, loss of taste/smell, nausea, diarrhea, and vomiting.

¶¶¶Only 245 participants confirmed their vaccination status, whether having received it or not, by vaccination card. 94% (117/125) of participants that reported ≥1 dose of vaccination confirmed their vaccination status by a vaccination card.

###Change compared to use before April 14th, 2020. This field is restricted to only those who said they used public transport before April 14, 2020.

Appendix Table 2. Descriptive statistics for unvaccinated, serosurvey participants (n = 2,181) by seropositivity in Sitakunda Upazila. This table includes sociodemographic factors, measures of urbanicity, COVID-like symptoms, COVID testing and vaccination, and COVID-19–related behaviors.

Sex					
M	1001	620 (61.9)	381 (38.1)	65.8 (61.0–70.6)	1.07 (1.01–1.13)
F	1180	700 (59.3)	480 (40.7)	60.7 (56.3–65.3)	Referent
Overall	2,181	1,320 (60.5)	861 (39.5)	63.4 (59.2–67.6)	NA

Appendix Table 4. The number of positive controls used to estimate the empirical sensitivity of the Wantai total Ab assay and SARS-CoV-2 positivity by time since symptom onset.

Time post-symptom onset, d	No. samples	% Seropositive (n)
3–13	2	100 (2)
14–30	6	83.3 (5)
31–60	5	100 (5)
61–90	7	100 (7)
91–120	7	85.7 (6)
121–150	10	80 (8)
151–180	12	83.3 (10)
181–210	11	72.7 (8)
211–240	9	100 (9)
241–275	12	100 (12)

Appendix Figure 1. Map of the study population in Sitakunda Upazila (green) in the Chattogram District of Bangladesh. The 580 enrolled households sampled in the serosurvey by enrollment time (pre- versus post-lockdown) and the 2 healthcare facilities in Sitakunda (Bangladesh Institute of Tropical & Infectious Diseases and Sitakunda Upazila Health Complex) are shown on the right side of the figure.

Appendix Figure 2. Map of the sampled clusters and sampled dwellings within clusters in the Sitakunda Upazila by samples drawn at three different periods: first draw (March 2021), second draw (May 2021), third draw (June 2021). Three separate sample draws were conducted because of interruption from the nationally imposed lockdown and a large percentage of nonresidential structures among housing

structures sampled from the satellite imagery. A) Clusters were sampled 41 times with 14 structures each during the first 2 draws and 12 structures during the third draw. B) We oversampled the number of structures by 40% to account for nonresidential buildings for a total of 574 sampled structures for the first 2 draws and 492 for the third draw. C) Households were enrolled across the entire subdistrict of Sitakunda during each enrollment period and by sample draw (households enrolled pre-lockdown were only drawn from the first sample).
