Experimental Infection and Transmission of SARS-CoV-2 Delta and Omicron Variants among Beagle Dogs

Appendix

Appendix Figure. Creatine kinase levels in dogs infected with and or exposed to transmission of Delta or Omicron variants. We designated 1 negative control dog, 2 each infected with Delta or Omicron variant, and 2 each cohoused with infected dogs (i.e., transmission dogs). In the key, individual dogs are identified as -1 and -2 along with a status designation. NC, negative control; DT, Delta transmission dog; DI, Delta-infected dog; OT, Omicron transmission dog; OI, Omicron-infected dog
