FROM THE NATIONAL CENTER FOR HEALTH STATISTICS

Percentage of Residential Care Communities* That Use Electronic Health Records, by Community Bed Size — United States, 2018, 2020, and 2022[†]

^{*} Residential care communities are state-regulated, have four or more beds, provide room and board with at least two meals per day, and are staffed to provide supervision and assistance with personal care and health-related services to adults who cannot live independently but do not require intensive nursing care.

From 2018 to 2022, the percentage of residential care communities (RCCs) using electronic health records (EHRs) increased from 36% to 48%. Use of EHRs increased during this time regardless of RCC size, and larger RCCs were more likely to use EHRs compared with smaller RCCs.
