

Update to the 2004 NNHS Resident File

Four variables in the 2004 NNHS Resident File were updated in June 2009. The variables are:

ADMDAYS (Total number of days covered between beginning date and ending date of charges at admission);

ADMPDIEM (Computed per diem charges at time of admission);

RCTDAYS (Total number of days covered between beginning date and ending date of most recent charges); and

RCTPDIEM (Computed per diem charges for past month or billing period).

The update provides the correct number of billing days in each billing period (which were off by one day in the previous file). ADMPDIEM and RCTPDIEM were also recalculated with, respectively, the updated values for ADMDAYS and RCTDAYS.
